

CLAIMS

We claim:

1. A television set, comprising:
5 a receiver that receives a television broadcast that includes a prompt;
a prompt mode function that generates a signal having a state that either
enables or disables a presentation of the prompt during the broadcast, the
prompt indicating the presence of an information address in the broadcast, the
information address indicating how additional information about the broadcast
10 can be obtained.
2. The television set according to claim 1, wherein the state of the prompt
mode function signal is determined by a command received in a short range
wireless signal.
15
3. The television set according to claim 1, wherein the state of the prompt
mode function signal is determined by a location table output.
4. The television set according to claim 1, wherein the location table output
20 is determined by a global positioning system input.
5. The television set according to claim 1, wherein the location table output
is determined by a local channel identifier received by the television set.
